

[NS068]

# N Scale Kits 68ft Heavy Duty DODX Flatcar [NS068]

Clean up castings as necessary to remove flash, etc. Glue steps under corners of car frame - note steps are handed. Glue brake items as shown. If using body mount couplers use the inner truck mounting hole as shown, this is the correct spacing. But if you are using truck mounted couplers use the outer hole. You will also need to remove some of the end frame to allow coupler swing. The amount depends on the minimum radius of your curves. The trucks are only available with couplers, For body mounts. It is straight forward to cut off the couplers and use them mounted on the body. This avoids having to buy additional couplers.

Recommended trucks/couplers are heavy duty Buckeye trucks Microtrains® #1173 [003 02 112]

This car is fitted with trucks in the scale position, and with body mounted couplers

For comparison, this car is fitted with truck mounted couplers (trucks nearer end of car)  
The cars look much better with the trucks in the correct position, and body mount couplers work fine on 12" radius curves. Holes are provided to mount trucks in either position.

Shown with M1A2 tank tied down, in service. The DODX car will take two M1 tanks [Tank and tie-down chains not supplied]

Decals for these cars are available from:  
Cal North, 24 Butler Road, YELLOWKNIFE, NT,
